

WHAT IS CLAIMED IS:

1. An image print order system using a network, comprising:

an order receiving server which is connected to said network, and

5 a terminal unit connectable to said network, to which a recording medium can be mounted, wherein

said terminal unit, when the recording medium, storing a digital image data, a server-connection address information, and a designated print-order acceptant information, is mounted to the terminal unit, said terminal unit is
10 connected to said order receiving server based on said server-connection address information so as to transmit said designated print-order acceptance information and at least a part of said digital image data to said order receiving server; and further wherein

said order receiving server outputs a print command data based on the
15 received digital image data, and a command data by which an acceptant of an order in accordance with said designated print-order acceptant information can receive an image print that is printed based on said print command data.

2. An image print order system according to Claim 1, wherein said
20 order receiving server is a WWW server.

3. An image print order system according to Claim 2, wherein said server-connection address information and designated print-order acceptant information are recorded on said recording medium as URL data for specifying

a WWW page created for each receiver of the order, and

said terminal unit, after acquiring the data of the WWW page for each of said specified receivers of the order, transmits said digital image data to said WWW server.

5

4. An image print order system according to Claim 3, wherein the data of the WWW page for each of said specified receivers of the order includes data for acquiring data of a WWW page of another receiver than the receiver of the order according to said designated print-order acceptant information.

10

5. An image print order system according to Claim 3, wherein said terminal unit, when the receiver of the order according to said designated print-order acceptant information cannot receive the order, obtains a WWW page of a substitutive receiver of the order or a WWW page including order-receivable-receiver data.

15

6. An image print order system according to any one of Claims 1 to 5, wherein said order receiving server, when said terminal unit, when the receiver of the order according to said designated print-order acceptant information cannot receive the order, or by selection of an order requester, outputs command data for making it possible that another receiver than the receiver of the order according to said designated print-order acceptant information receives said image print.

20

7. An image print order system according to any one of Claims 1 to 5,
wherein said server-connection address information and designated print-order
acceptant information are recorded when the digital image data is recorded in
5 said recording medium.

8. An image print order system according to any one of Claims 1 to 5,
wherein said designated print-order acceptant information is data that
specifies a receiver of request to whom creation of said recording medium has
10 been requested.

9. An image print order system according to any one of Claims 1 to 5,
wherein said server-connection address information and said designated print-
order acceptant information are renewable.

10. A recording medium on which digital image data has been recorded,
which can be mounted to a terminal unit connectable to a network, and which
stores therein connection address data to a print order receiving server
connected to said network, designated print-order acceptant information, and
20 data for causing said terminal unit to connect to said order receiving server
through said network when the recording medium is mounted to said terminal
unit and to transmit said designated print-order acceptant information to said
order receiving server.

11. A recording medium according to Claim 10, wherein said order receiving server is a WWW server.

5 12. A recording medium according to Claim 11, wherein said server-connection address information and designated print-order acceptant information are URL data for specifying a WWW page created for each receiver of the order.

10 13. A recording medium according to any one of Claims 10 to 12, wherein said server-connection address information and designated print-order acceptant information are recorded when the digital image data is recorded in said recording medium.

15 14. A recording medium according to any one of Claims 10 to 12, wherein said designated print-order acceptant information is data that specifies a receiver of request to whom creation of said recording medium has been requested.

20 15. A recording medium according to any one of Claims 10 to 12, wherein said server-connection address information and said designated print-order acceptant information are renewable.

16. A recording medium providing method for providing a recording medium on which digital image data have been recorded, wherein

at least one of digital image data obtained by developing a photographic film before development and carrying out a photoelectrical conversion of the image after development, digital image data obtained by carrying out a photoelectrical conversion of the photographic film after development or an image of an image print, and digital image data recorded on other recording mediums is recorded on a single recording medium, and

there is included a step of recording connection address data to a print order receiving server connected to a network, designated print-order acceptant information, and data for causing said terminal unit to connect to said order receiving server through said network when the recording medium is mounted to a terminal unit and to transmit said designated print-order acceptant information to said order receiving server.

17. A recording medium providing method according to Claim 16, wherein said order receiving server is a WWW server.

18. A recording medium providing method according to Claim 17, wherein said server-connection address information and designated print-order acceptant information are recorded on said recording medium as URL data for specifying a WWW page created for each receiver.

19. A recording medium providing method according to any one of Claims 16 to 18, wherein said designated print-order acceptant information is data that specifies a provider to whom provision of said recording medium is requested.
